RGT SAVVOR

Red clover

- Thrives under grazing for long lasting productivity
- Exceptional spring and summer growth
- Strong disease resistance for healthier swards
- Versatile for pure swards or mixes to boost quality

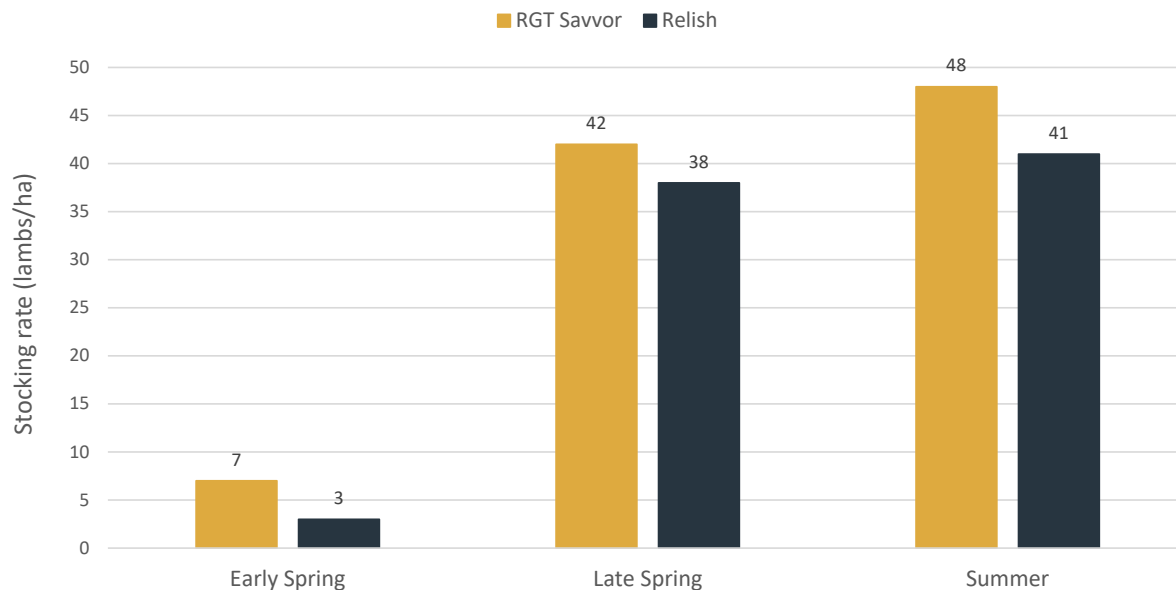

RGT SAVVOR

HIGHLY PRODUCTIVE AND PERSISTENT

The increased yields of ***RGT SAVVOR*** allow for a higher carrying capacity. Using FeedSmart and assuming an average growth rate of 200g/day for weaned lambs over 150 days, this translates to an additional 10 lambs/ha finished. At a market price of \$200 per head, that's an extra \$2,000/ha income.

EXCEPTIONAL SPRING AND SUMMER GROWTH

RGT SAVVOR delivers reliable, high-quality forage at critical times, supporting animal performance and improving profitability. It gets away early in spring, making it ideal for use as a pure sward lambing forage.

STRONG DISEASE TOLERANCE

With strong disease tolerance ***RGT SAVVOR*** makes it easier to maintain paddock quality and maximise yields.

LOW TO MEDIUM PHYTO-OESTROGEN LEVELS

Historically, some red clovers contained high phyto-oestrogen levels, which could negatively affect ewe fertility if fed before mating. New cultivars like ***RGT SAVVOR*** have significantly lower levels, reducing the risk of hormonal disruption.
