RGT SULTAN

Diploid annual ryegrass

- Lower sowing rate delivers per hectare cost benefit
- Increased sward density for greater resilience
- Greater growth equates to better nitrogen utilisation
- Boost reliability with minimal cost increase using treated seed

SHORT TERM GRASSES

RGT SULTAN

MORE SEED FOR YOUR MONEY

Being mindful of on-farm expenses, **RGT SULTAN** provides access to a lower-cost proprietary seed without sacrificing performance. This can often be the case with both uncertified or VNS (variety not specified) seed.

Using treated seed enhances reliability under increased insect pressure, especially in direct drilling situations.

DIPLOID ADVANTAGE

As a diploid, **RGT SULTAN** produces a denser pasture with more seeds per hectare. Compare to tetraploids, it also generates more tillers per plant, enhancing competitiveness against weeds and increasing crop resilience.

IMPROVED PASTURE STRUCTURE

More plants and tillers reduce bare ground, decreasing muddy areas during winter grazing. Reduced pasture damage from pugging helps pastures recover faster and increases potential yield.

BETTER UTILISATION OF NITROGEN

Greater growth allows for improved nitrogen (N) utilisation from animal excretion, helping minimise the risk of leaching.

INCREASED ANIMAL PRODUCTION

Provides animals with high-quality fibre at a key time of year, supporting better overall animal productivity.

The technical data mentioned in this document comes from tests carried out by RAGT. The results obtained may vary according to agronomic and climatic conditions, as well as specific cultivation techniques. In any event, the technical data provided is for information purposes only and does not bind ragt contractually.
